

Bug Details

Issue No: 1

Title: **Checkbox and label misalignment on QA AxiomPro homepage**

Env: Dev

Browser: Chrome

Priority: Low

Severity: Low

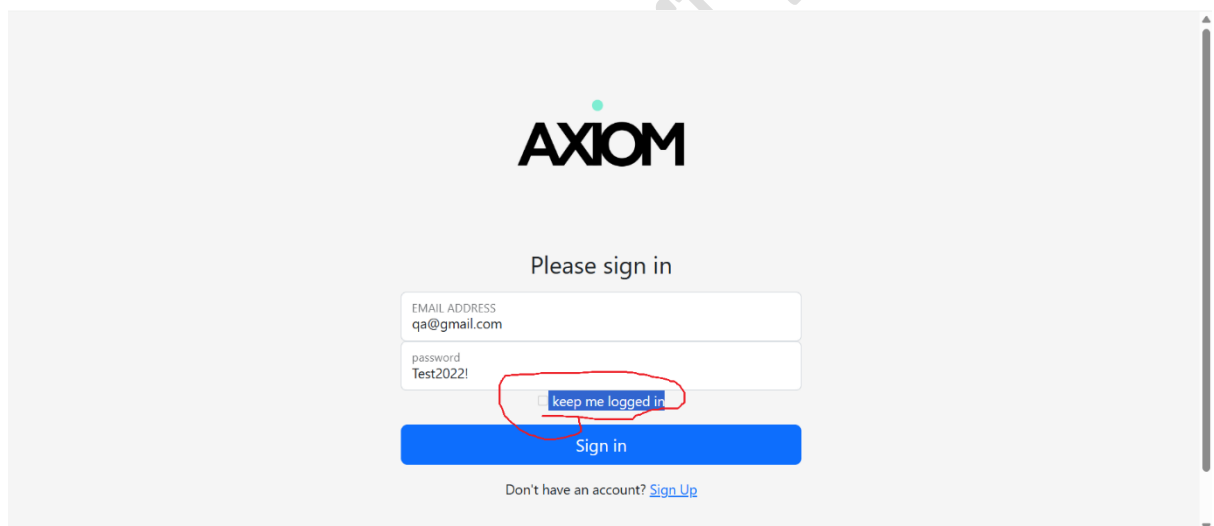

Steps to Reproduce:

1. Open the Chrome browser and navigate to: <https://qa.axiompro.biz/index.php>

Actual Result: Check box and label not aligned properly

Expected Result: Check box and label should be aligned properly

Issue No: 2

Title: **Signup link navigates to 404 Not Found page**

Env: Dev

Browser: Chrome

Priority: High

Severity: High

Steps to Reproduce:

1. Open the Chrome browser and navigate to: <https://qa.axiompro.biz/index.php>
2. Do not enter a username or password.
3. Click on the Signup link.

Actual Result: The page displays 404 Not Found.

Expected Result: The application should navigate to the user creation page, allowing users to sign up and create an account for login.

Note:

If the signup page is not ready, the link should be disabled or hidden from users.

Screenshot:

Not Found

The requested URL /sign_up.php was not found on this server.

Issue No: 3

Title: **Keep me logged in' checkbox is not clickable on login page**

Env: Dev

Browser: Chrome

Priority: Medium

Severity: Medium

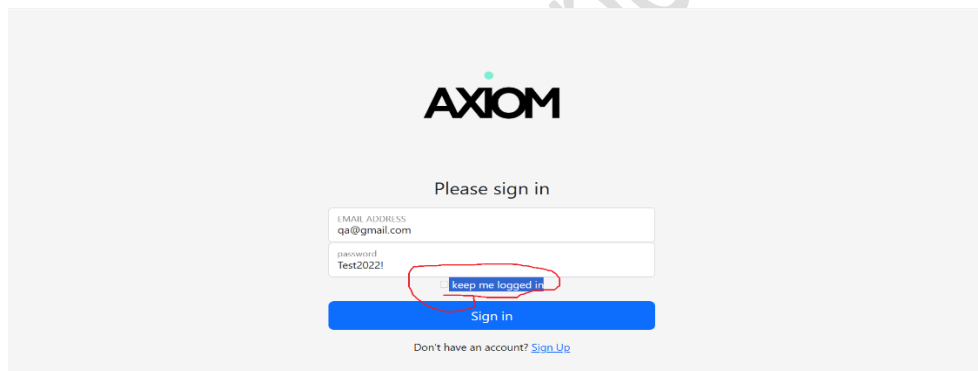

Steps to Reproduce:

1. Open the Chrome browser and navigate to: <https://qa.axiompro.biz/index.php>
2. Enter a valid username and password.
3. Click on the Keep me logged in checkbox.

Actual Result: The Keep me logged in checkbox is not clickable and appears to be disabled..

Expected Result: The user should be able to select the Keep me logged in checkbox to save login details in an encrypted form.

Issue No: 4

Title: **Login password exposed publicly on login page**

Env: Dev

Browser: Chrome

Priority: High

Severity: Critical

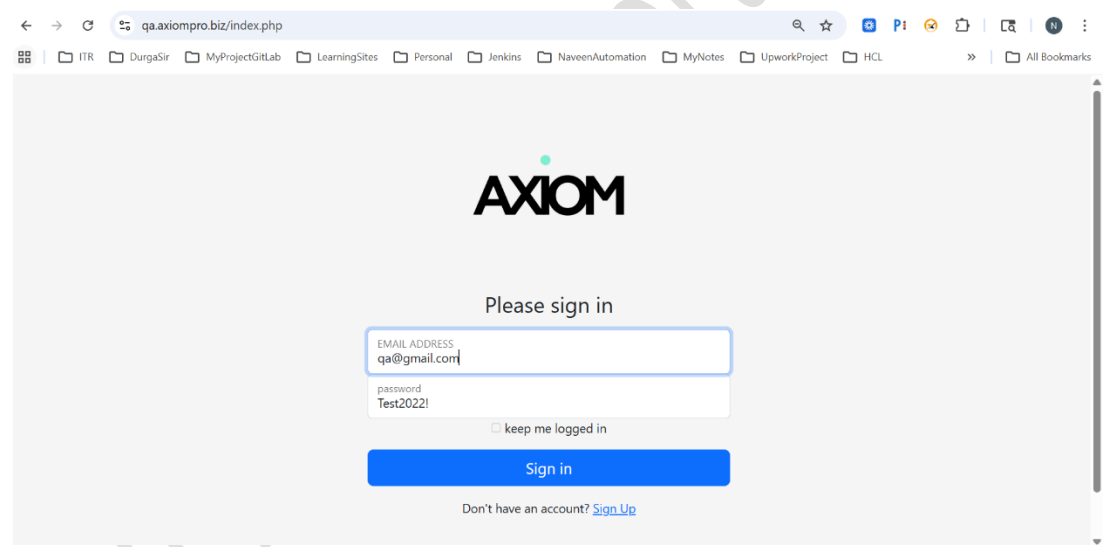

Steps to Reproduce:

1. Open the Chrome browser and navigate to: <https://qa.axiompro.biz/index.php>
2. Observe the login credentials section on the page.

Actual Result: The login password is visible publicly on the page...

Expected Result: Passwords should not be exposed publicly. Login credentials must be secured and not displayed to users.

Issue No: 5

Title: **Account not locked after multiple failed login attempts**

Env: Dev

Browser: Chrome

Priority: Medium

Severity: High

Steps to Reproduce:

1. Open the Chrome browser and navigate to: <https://qa.axiompro.biz/index.php>
2. Enter an incorrect username and password.
3. Click on the Submit button.
4. Repeat the above steps three times with invalid credentials.

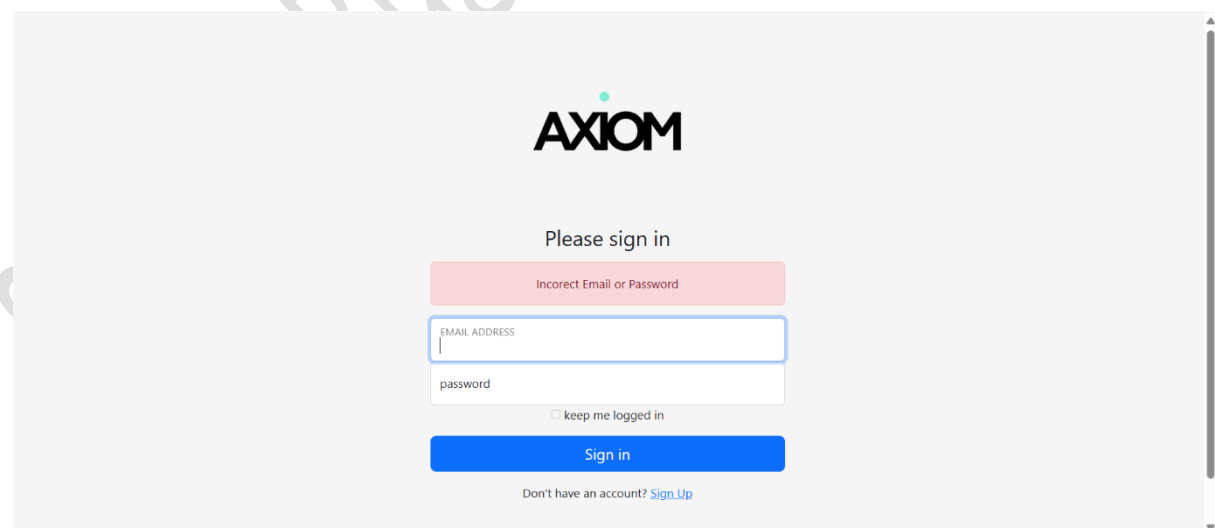

Actual Result: The application displays an error message for invalid credentials, but after three failed attempts, the user account is not locked.

Expected Result: After three consecutive failed login attempts, the application should lock the user account and display a message such as:

"User account is locked for 1 hour. Please try again after 1 hour."

Note: This is an expected security feature and should be implemented.

Issue No: 6

Title: **Incorrect capitalisation in login error message**

Env: Dev

Browser: Chrome

Priority: Low

Severity: Low

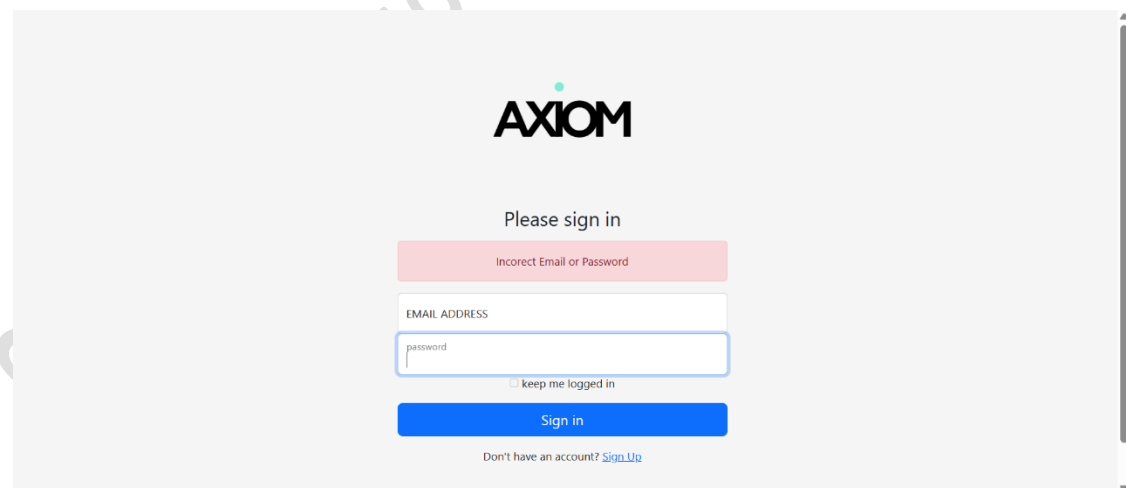

Steps to Reproduce:

1. Open the Chrome browser and navigate to: <https://qa.axiompro.biz/index.php>
2. Enter an incorrect username and password.
3. Click on the Submit button.

Actual Result: The error message "Incorrect Email and Password" is displayed, but the spelling and capitalisation are incorrect.

Expected Result: The message should be displayed as "Incorrect email and password," with proper spelling and formatting.

Issue No: 7

Title: **Email Address floating label overlaps with input field on login page**

Env: Dev

Browser: Chrome

Priority: Low

Severity: Low

Steps to Reproduce:

1. Open the Chrome browser and navigate to: <https://qa.axiompro.biz/index.php>

Actual Result: The Email Address floating label overlaps with the input field.

Expected Result: The Email Address label should be properly aligned and should not overlap with the input field.
